

## NEW ADDITIONS IN BIBLIOGRAPHICAL DATABASE ON HIMALAYA

*R.C. Prasad*

*Library and Information Centre*

*G.B. Pant Institute of Himalayan Environment and Development, Kosi-Katarmal, Almora 263 643*

Information embodied in documents is a great national and international resource. Scientific and technological knowledge has been expanding at a terrific speed. With the result, especially the scientists have been facing problems to cope with the relevant literature. It is becoming more and more difficult for them to keep themselves up-to-date and well informed in the field of their specialization. In the changed context nobody could afford to neglect information already available in some form. Not only that the available information had also to be collected and passed on to the persons who could use them profitably within the shortest possible time. Now the modern library, with a few exceptions is regarded as a service institution and its aim is to enable the users to make the most effective use of resources and services of the library. This type of library acquires material, processes it, and makes it available for use rather than preservation. In order to facilitate the use of a library, Librarians provide tools like library catalogues, shelflist and subject bibliographies, etc.

Literature on area of studies like Himalayas is vast, multilingual and expensive. It becomes a matter of concern to any serious research worker. There is a definite need at local, regional, national and international levels at least to reduce the gravity of the problems if not to solve this fully. Bibliography is a technique of systematically producing descriptive lists of written or published records. Due to literature explosion, it is very difficult for any library to procure all the materials on any subject, even if it is too narrow. The concept of resource sharing becomes most popular in the field of research. By resource sharing, more and more research materials are used and it will definitely help research and development activities. Bibliographical services are most powerful tool for resource sharing. No modern library can function without bibliographical tool. Bibliography contributes towards the use of books and other materials and promotes useful applications of knowledge. The basic aim of bibliography is to assist the users in locating the existence of or identifying a book or other material of their interests.

In this current subject bibliography (Supplement of the Bibliography published in ENVIS Bulletin: Himalayan Ecology and Environment 3(1&2): 92-112), an attempt has been made to categorize the books on Himalaya (Procured in the Library and Information Centre of G.B. Pant Institute of Himalayan Environment and Development after the publishing of ENVIS Bulletin 3(1&2)) under major subject headings. Entries are arranged using combination of Author, Title and Publisher Indexes, under various major subject headings. The present bibliography is the result of the extracts from the database of library, which is being maintained by the software package **PALMS (Prasad Automated Library Management System)**, developed by the author himself. In displaying data and entry format Indian Standards have been followed which reads - Author. Title : Subtitle. Place of Publication, Publisher, Year of Publication. Pages.

### AGRICULTURE

- Acharya, M., S.R. Sharma and B. Acharya. Review of institutions dealing with agricultural support services in the Hills and mountains of Nepal. Kathmandu, ICIMOD, 1995. 245p.
